

FOR IMMEDIATE RELEASE

**EASY-ARCH RECOGNIZED BY THE NAHB'S RESEARCH CENTER AND
PLACED IN THEIR TECHNOLOGY INVENTORY.**

PATH (Partnership for Advanced Technology in Housing) recognizes Easy-Arch.

Murietta, CA — Easy-Arch, the pre-formed metal framing arches, have been acknowledged by the Home Building Industry's Technical Information Resource and placed in their Technology Inventory.

According to PATH, this inventory includes: "Selected innovative building products, processes, and systems that can produce safer, more energy efficient homes at a lower cost and higher quality."

Easy-Arch qualifies as a "Resource Efficiency" product, reducing time and labor spent to build arches the traditional way. Using Easy-Arch, builders can install 12 to 18 arches in the time it takes to *build* one in the field.

In addition, call backs become a thing of the past as each arch is pre-formed to exact and consistent specifications.

"One of the simplest and least expensive ways to add glamour and beauty to a home is an arch" explains William Rodriguez of Easy-Arch. "With labor costs on the rise and the importance of quality and customer satisfaction, many builders shy away from them. Easy-Arch makes it convenient for builders, framers and drywallers alike."

Because of the huge number of housing technologies and the diversity of builders, even the best technologies do not always make a big splash when they enter the market. PATH created the Technology Inventory to accelerate the awareness and acceptance process.

PATH's Technology Inventory lists over 160 new technologies -- from advanced framing techniques to white LED lighting -- that demonstrate great potential for improving housing performance, but that have not been widely used or accepted.
