

PRESS RELEASE

FOR IMMEDIATE RELEASE

NEW 4-FOOT COMPOUND RADIUS ARCH AVAILABLE FOR PRODUCTION

The smallest member of the elegant Compound Radius product line

Murietta, CA — Due to its low profile and tight corner radii, the “CR” has always been one of the most popular Easy-Arch designs. Because the Compound Radius is virtually impossible to form in the field with traditional plywood and blocks, the expansion of the Compound Radius product line was inevitable.

Builders, specifiers, architects, remodelers, and others all agree that Easy-Arch is an easier way to make arched doorways while lowering construction costs and improving quality control. Easy-Arch is a pre-formed 25-gauge galvanized steel framing arch you can quickly nail in place during framing to create a desirable design element that adds beauty, elegance, and greater value to a home.

While original Easy-Arch styles include 90° Quarter Circle, 180° Half Circle, Eyebrow and Tru Elliptical, the company is now proud to offer a four foot version of the elegant Compound Radius design.

As with all Easy-Arch products, the new arch is available for 2x4, 2x6 and Adjustable web sizes. According to William Rodriguez of Easy-Arch, “Engineering has developed the necessary tooling to accomplish the tightest radius arch we’ve ever attempted”. “Furthermore, we are working on a three foot version to complete the Compound Radius product line”.

-more-

In addition to the new four foot Compound Radius, Easy-Arch is available in a variety of standard sizes and dimensions, each of which secures to framing in seconds. What results is a perfect arch at a fraction of the cost of forming the same shape in a traditional manner.

Available in over 150 standard sizes—all pre-formed to certain dimensions, and ready-to-install—Easy-Arch has many applications, including interior and exterior doorways, windows, hallways, cased openings, and any nook. “Because Easy-Arch is pre-formed, builders no longer have to worry about call-backs”, explains Rodriguez. Each product is engineered to be non-structural and non-load bearing, requiring no additional permits or engineering.

With the Easy-Arch family of innovative products growing bigger and more diverse, the ability to achieve creative archways is just getting easier and easier. Aside from the aesthetically superior design and elegance, Easy-Arch lends to any building project, users will also appreciate the bottom line when installing these cost-effective arches. From interior and exterior doorways to windows, hallways, and nooks, Easy-Arch offers an array of design possibilities that any discerning customer will surely fall in love with.
